

SLOVAK ENVIRONMENT AGENCY

is implementing an activity

INTERNATIONAL CONFERENCE
CONTAMINATED SITES
ZNEČISTENÉ ÚZEMIA
MEDZINÁRODNÁ KONFERENCIA

INTERNATIONAL CONFERENCE

CONTAMINATED SITES 2022

TRNAVA, SLOVAK REPUBLIC, 12 – 14 OCTOBER 2022

*The activity has been implemented within the framework of national project
Information and providing advice on improving the quality of environment in Slovakia.
The project is cofinanced by Cohesion Fund of the EU under Operational programme Quality of Environment.*

The first national database of Potentially contaminated sites in Slovenia (PCSs) and a model approach for determinating priority treatment

Barbara Lampič

University of Ljubljana (Faculty of Arts, Department of Geography), Slovenia

barbara.lampic@ff.uni-lj.si

*The activity has been implemented within the framework of national project
Information and providing advice on improving the quality of environment in Slovakia.*

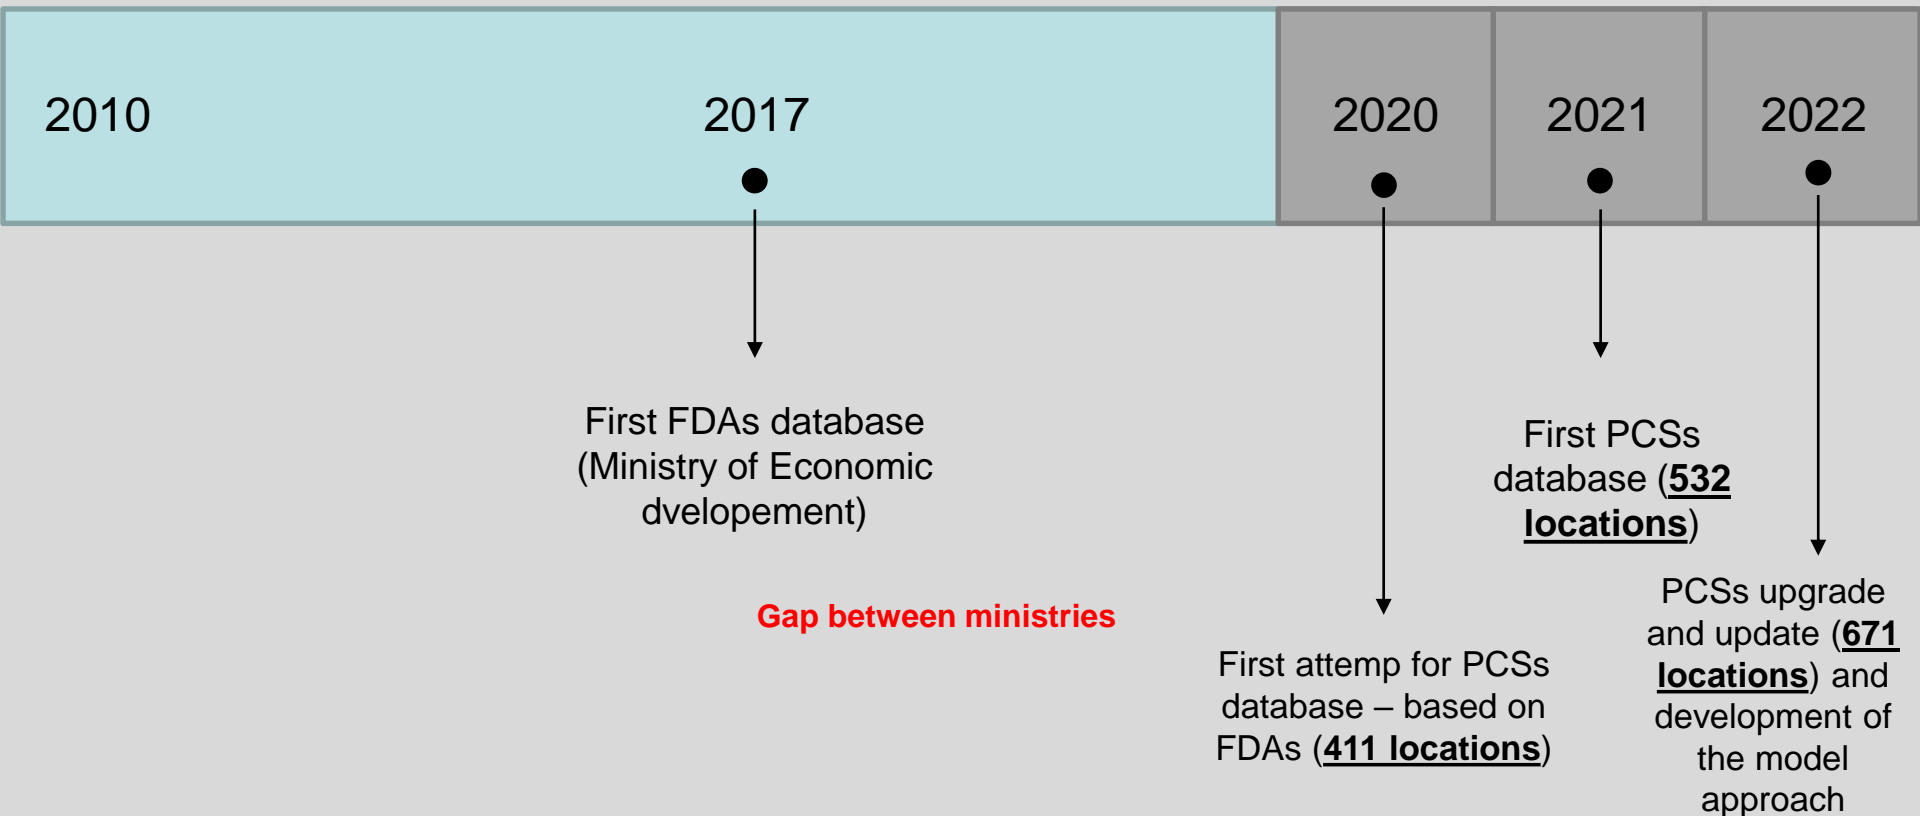

The project is cofinanced by Cohesion Fund of the EU under Operational programme Quality of Environment.

Slovenian PCSs database development

Functionally derelict areas (FDAs) research (2010-2012, 2015-2017, 2019-2020, 2022-2023 ...)

Potentially contaminated sites research (2020-)

Resources for first database

- Database of Functionally derelict areas (FDAs)
 - industrial and craft activities, infrastructure, agricultural activities, defense, protection and rescue, transitional use, extraction of mineral resources and service activities
- Closed industrial landfill
- Closed communal landfills
- Industrial establishments (Seveso directive)
- Locations based on Industrial emission directive (IED)
- Individual locations

Monitoring system - set of attributes

no.	group	attributes
1.	PCS IDENTIFICATION	ID, Name, Date of identification, Status of the location
2.	LOCATION	Statistical region, Municipality, Cadastral municipality, Plot number(s)
3.	DESCRIPTION	PCS type and subtype, Main pollution source by activity, Pollution source - detailed, PCS size (ha), PCS abandonment rate, Presence of facilities, Ownership , Soil type, Land use, Protection regimes
4.	POLLUTION	Source of pollution (industrial activity; storage; disposal of waste, soil; spills, discharges; growth of invasive plant species; other), Description of the source of pollution, Pollutants (soil, water), Research to date, Reliability, Description of reliability
5.	IMPLEMENTATION OF MEASURES AND MONITORING	Risk reduction Measures, Description of the implementation of risk reduction measures, Monitoring
6.	SOURCES	Photographs, Attached materials, PCS identification source, Additional comments

Monitoring system - application

The screenshot displays a monitoring application interface. On the left, a map shows several highlighted polygons: a green polygon labeled '176' and a large red polygon labeled '481'. The map includes street names like 'Kidričeva ulica' and 'Kumerdejeva ulica', and landmarks like 'TUŠ' and 'Mestno Pokopališče'. On the right, a sidebar titled 'Pametni urejevalnik' contains a data entry form for a 'POO - poligoni' record. The form fields are as follows:

- ID POO: 176
- Ime POO: Stara Cinkarna
- Datum prvega vnosa: 1. 06. 2021
- Ime popisovalca: FF UL
- Kontakt popisovalca: rcgeo@ff.uni-lj.si
- Prednostna obravnava: zelo potrebna
- Status lokacije: [dropdown menu]
- Datum spremembe statusa: [dropdown menu]
- Ime in kontakt vnašalca sprememb: [text field]
- Kohezijska regija: Vzhodna Slovenija
- Statistična regija: Savinjska
- Občina: Celje

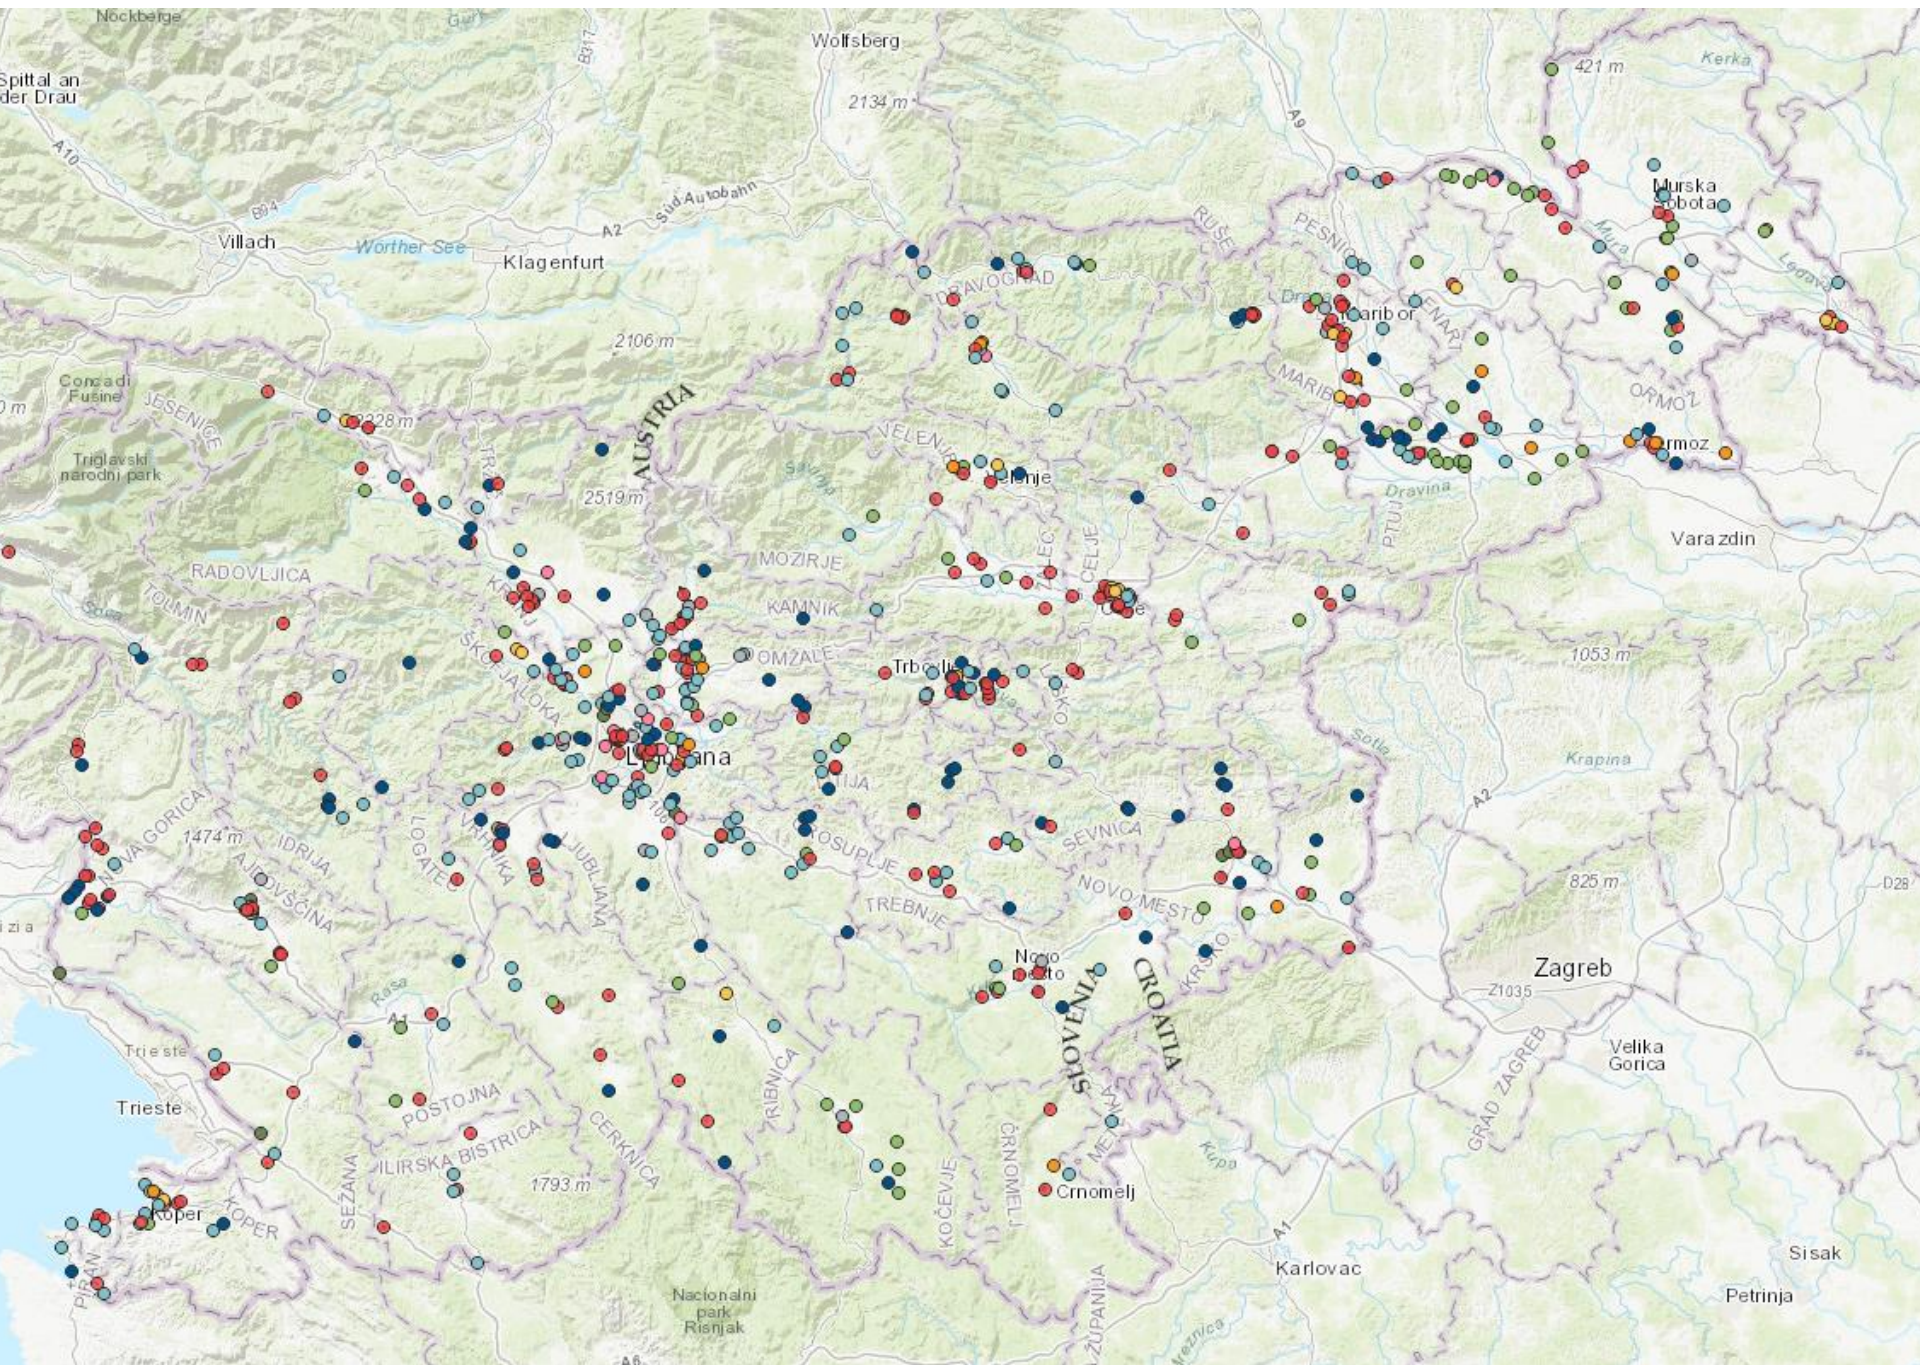

At the bottom of the interface, there are buttons for 'Zapri' and 'Shrani', and a row of numbers: 34, 71, 159, 248. A small 'Datum spremembe' field is visible at the bottom left.

Characteristic of PCSs in Slovenia

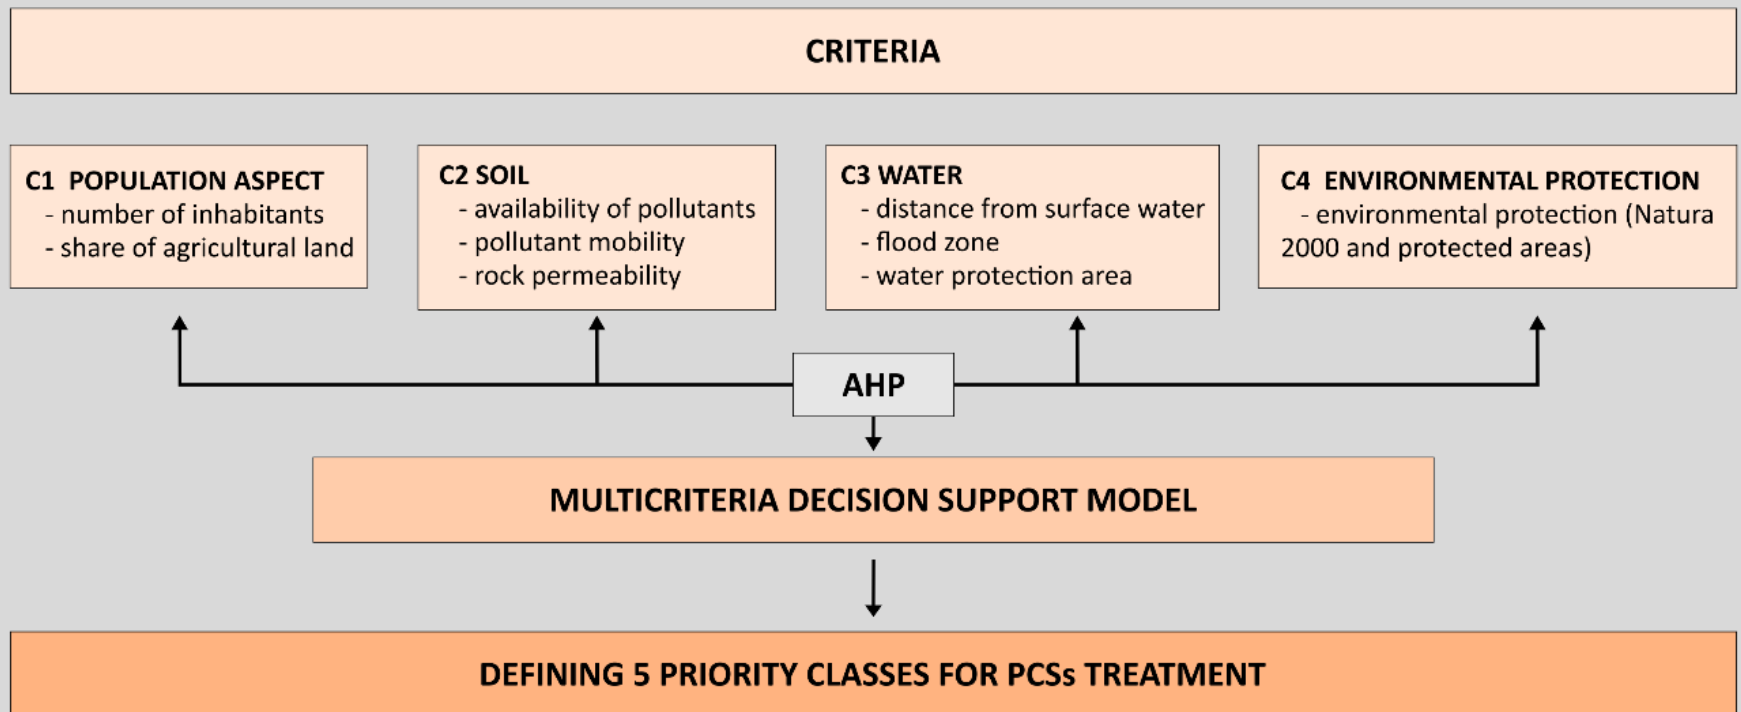

- industry
- disposal and backfilling
- industry
- mining, extraction of mineral resources
- disposal and backfilling
- agriculture
- mining, extraction of mineral resources
- infrastructure
- agriculture
- infrastructure
- storage
- storage
- service activities
- service activities
- other
- other
- defense, protection and rescue services
- defense, protection and rescue services

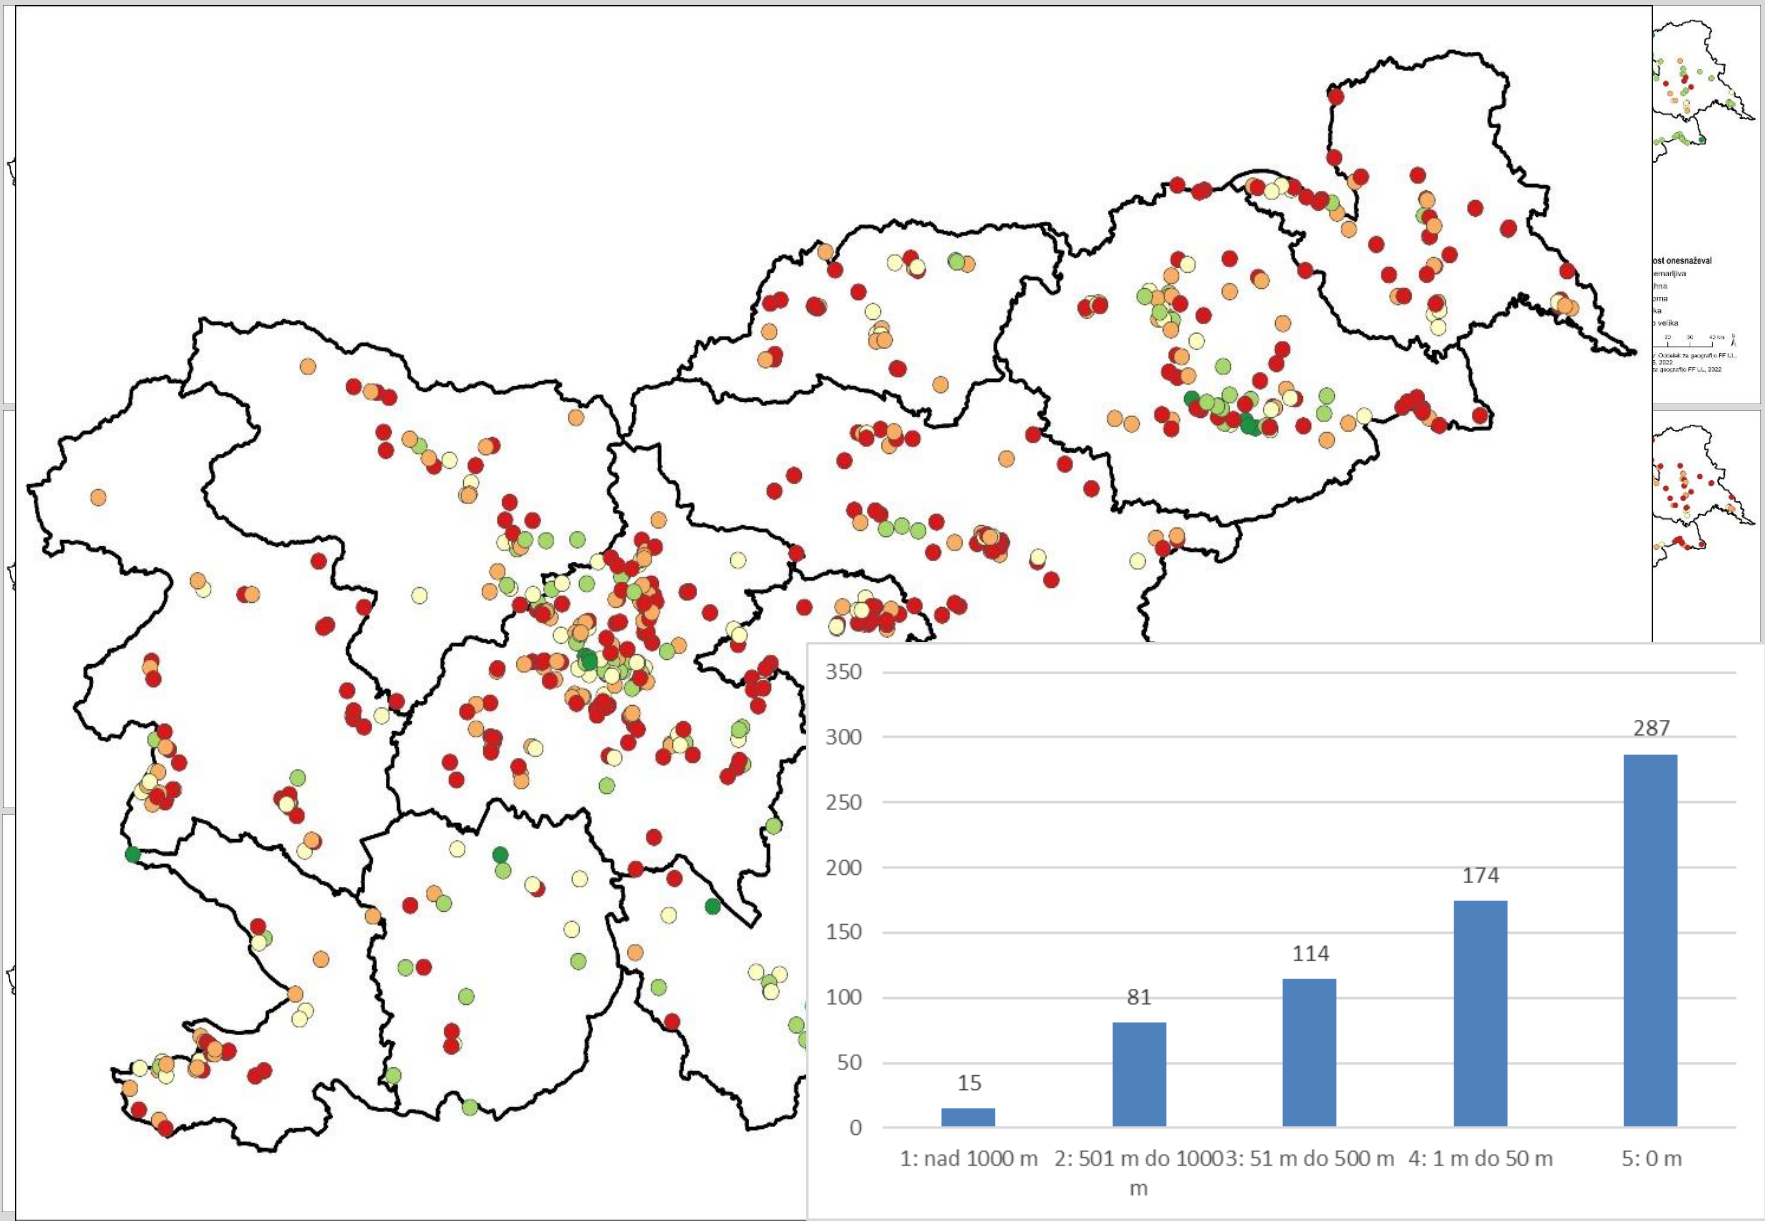

Model approach for determinating priority treatment

- Foreign practices, Literature analysis
- 4 criteria and 9 indicators

Criteria and indicators analysis

Criteria and indicators analysis - examples

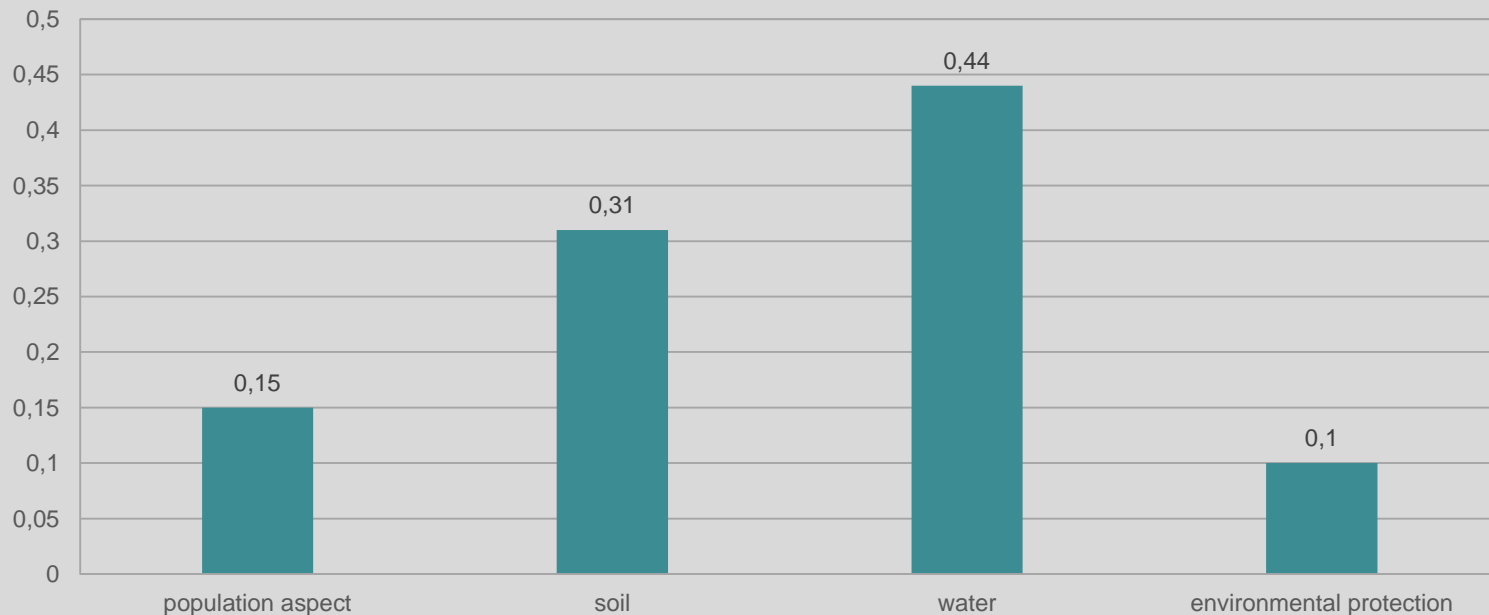

Sečovlje mine (Piran) is located in Natura 2000 and Sečovlje Salina Nature Park, directly next to a Dragonja river and in flood risk zone.

Ihan Farms (Domžale) located directly next to Kamniška Bistrica river, surrounded by agricultural land and Ihan town.

Weighting criteria

- The analytical hierarchy process (AHP)
- Most influenced by criteria related to water (0.44) and soil (0.31). Together, they account 3/4 of the total impact.

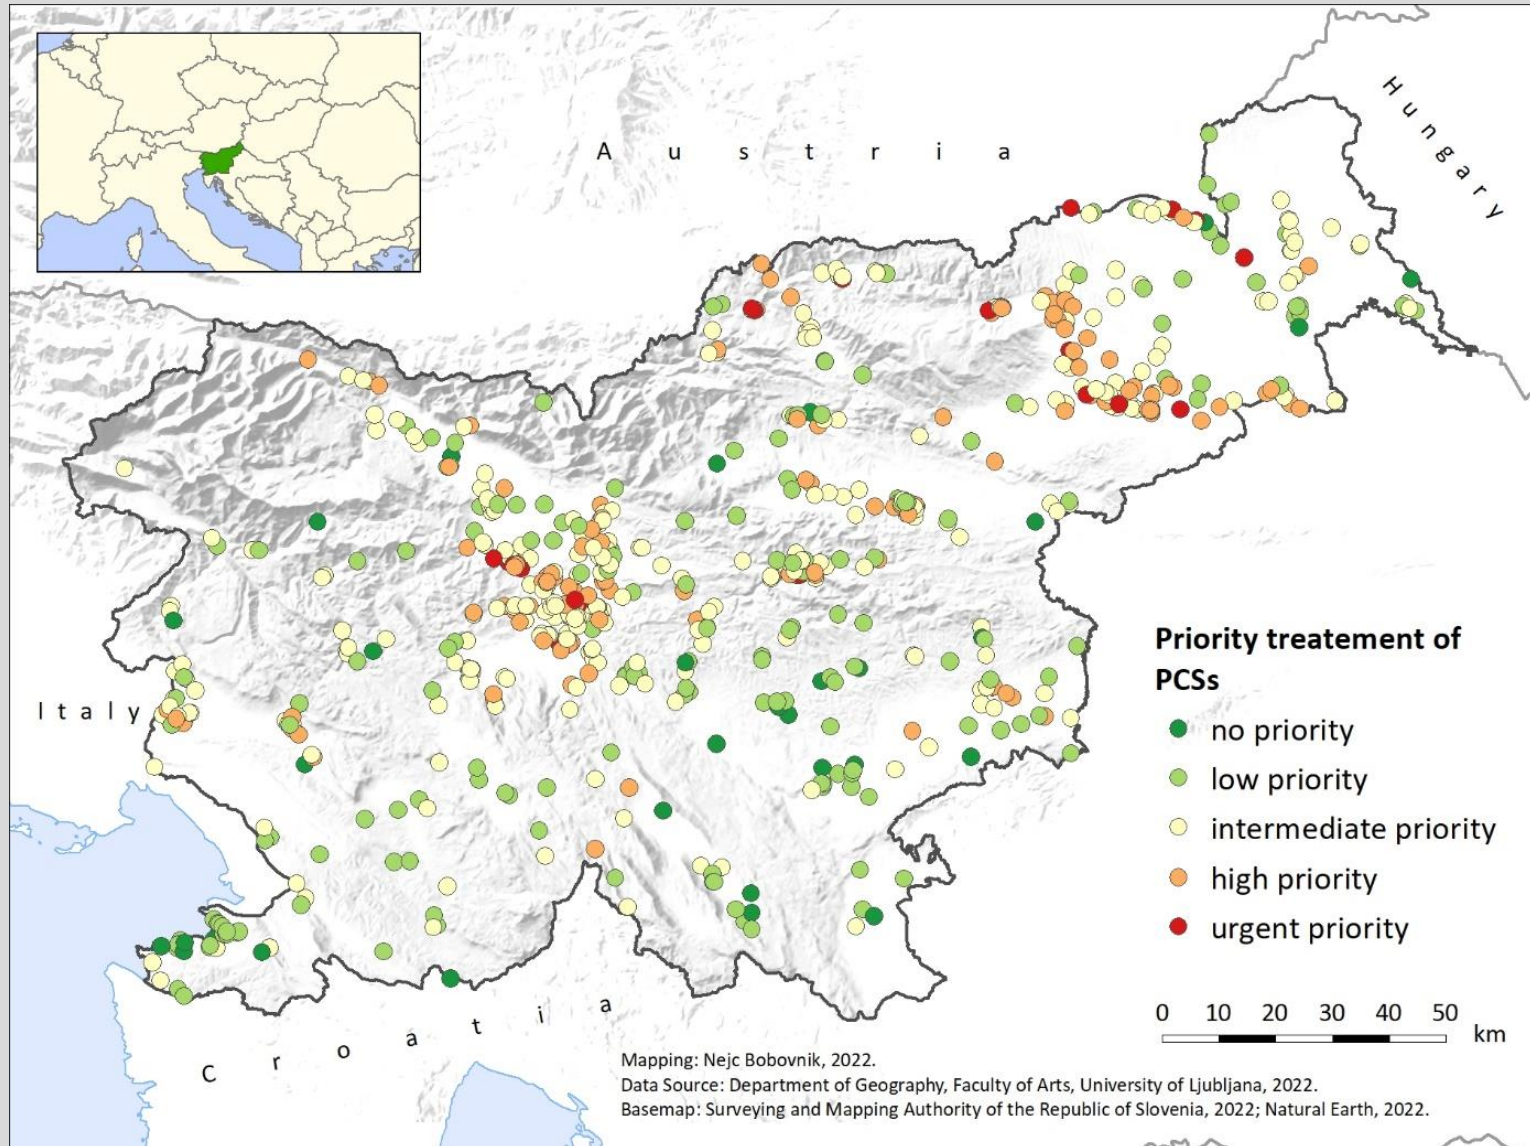

Priority treatment of PCSs in Slovenia

- Based on the sets of criteria and indicators.
- Multicriteria decision support model to define five priority classes

Spatial distribution of PCSs regarding priority treatment

Locations with urgent priority

Jarški prod (Ljubljana) shows the highest priority.

- Population density 428 inhabitants/km²;
- 31 % agricultural land
- Rock permeability is critical (5);
- All indicators related to water are critical (5).

Lagoons in Podgrad (Gornja Radgona) shows the second highest priority.

The density of PCSs
